

Integrated framework for adult education providers to support social inclusion for learners with health- related conditions

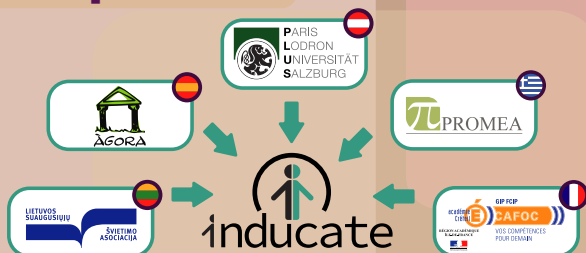

The project

Access to quality adult education (AE) remains elusive for many adults with health-related conditions (HRC).

The project aims to increase the effective engagement to AE for people with health issues, as a means to strengthen social inclusion and active participation in society and increase employment opportunities.

The partners

The objectives

-  Identify the factors that affect AE effectiveness on learners with HRC.
-  Provide an Integrated Assessment Framework (IAF), a self-assessment tool, for AE providers to evaluate the impact of their offerings on learners with HRC.
-  Share recommendations and tools to enable AE providers to successfully address the needs of persons with health-related issues.

The results

-  A report on 10 factors for measuring adult education effectiveness on learners with HRC.
-  An IAF for the evaluation of the effectiveness of adult learning providers towards persons with HRC.
-  A road-map and toolkit to help AE providers improve their effectiveness, adapting education provision to the needs of learners with HRC.
-  A Memorandum of Cooperation as a basis of a European network of AE providers.

The Long-term benefits

- 1** Uptake and adaptation of INDUCATE IAF and tools by AE providers in EU.
- 2** Uptake of INDUCATE framework from national bodies involved in monitoring, quality assurance and evaluation of AE systems in Europe.
- 3** Participation of a growing number of adult learners with HRC in lifelong learning programmes resulting in social inclusion.
